

Amendments to the Specification:

Please replace the paragraph on page 1, lines 5 to 8, with the following rewritten paragraph:

The present invention relates to an antenna apparatus and more particularly to an antenna apparatus which is mounted, for example, in the interior of a motor vehicle, ~~for example~~, and enables good sensitivity to be secured.

Please replace the paragraph starting on page 6, lines 30 to 33, and continuing on page 7, lines 1 to 11, with the following rewritten paragraph:

Further, the antenna apparatus 1 has an antenna base 4 attached securely onto any installation face. As shown in Fig. 1C, hook holes 4A are formed in the antenna base 4, whereby the antenna apparatus 1 can be hung on the wall. Each hook howl 4A has a large-diameter portion 4a into which a hook (illustration omitted) provided on the wall is inserted and narrow universal slit portions 4b and 4c formed on both sides of the large-diameter portion 4a. The antenna apparatus 1 is prevented from ~~being~~ inadvertently ~~fallen~~ falling off by inserting each hook into the large-diameter portion 4a and then sliding the hook toward the slit portion 4b or 4c. In this case, as each hook hole 4A has the universal slit portions 4b and 4c formed on both sides of the large-diameter portion 4a, the antenna base 4 can be hung on the wall upwardly or downwardly.
